Añade la capa "protected_area" al proyecto y añade un nuevo campo llamado "protect". Asigna 0 a todas las filas usando el "field calculator".

Convierte la capa a ráster usando "Feature to raster" con un tamaño de celda de 10m y una extensión de procesado similar al MDE.

Reclasifica el resultado asignando 0 a los valores 0 pero asignando 1 a los valores con "NoData".

Ahora llega el momento en el que combinas todos los rasters parciales en una multiplación. Usa la "Raster calculator".

El resultado es dos áreas diferentes que cumplen los requisitos (una en el este y una en el oeste). El resto de áreas no cumplen uno o más condiciones.
